

## Project-Content Management System

Website that you have to build that two aera, Public Aera and Admin aera.

**Figure 1-Public & Admin Aera**

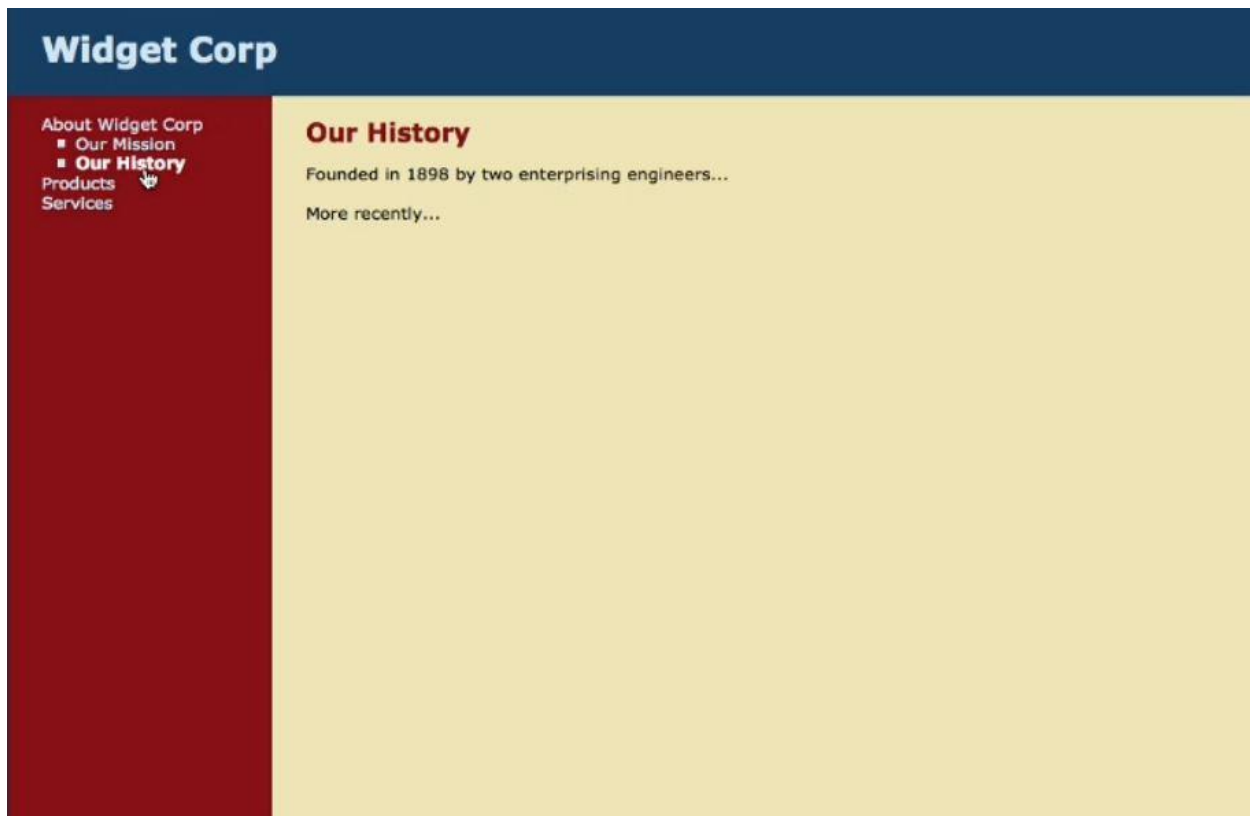

Public aera (fig-1) is simple having similar page structure. An aera for navigation like a menu and content and aera for the content using pick an item which will show pages contents. Pick a navigation item, get new items. Site will have sets of pages called subject so picking a subject and page.

For the admin aera (fig-1), there will be login page where you will be asked the user to login using username and password to gain access and if login fails then try again. If the login is successful though then it will lead to Admin Menu page. That is simple landing page having options like manage content, manage admins and logout. Those options are just links that will bring to different pages. In manage contents, there will be navigation area to navigate between subject and pages which will allow the admin to do subject CRUD and Page CRUD i.e. Create, Read, Update and Delete. There will be another CRUD section in admin menu i.e. Manage admins for admin CRUD which will able to do the add admin using username and password, delete and edit them. And in final menu option, there will be logout which will be able to logout from the admin section and take you back from login section again.

**Figure 2-index.php**

This is widget corp site. This is index.php (shown in fig-2), the default page of the public side of the site. There is a header widget corp at the top and have a navigation bar on left side with links in it and on the right side, there is page content has simple welcome message.

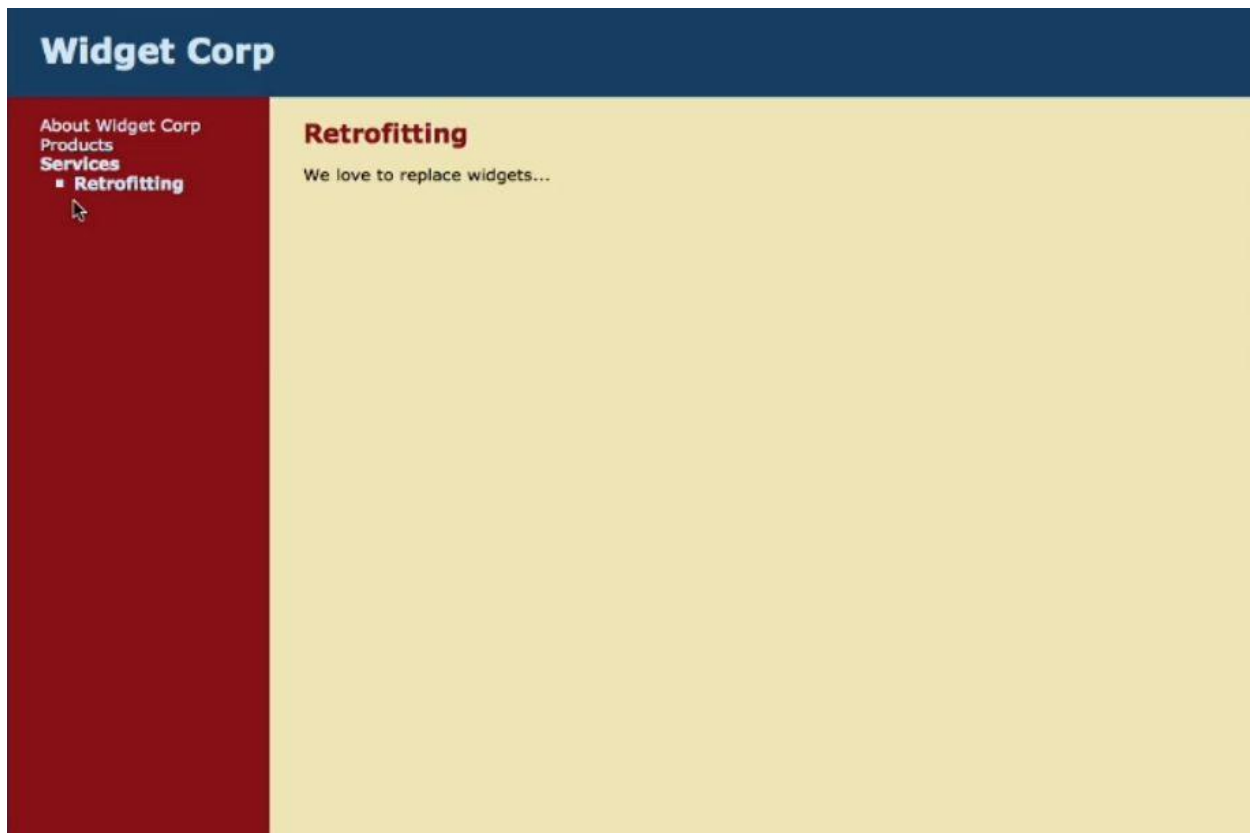

**Figure 3 Our History**

The navigation bar contains about Widget Corp products and services as links. On clicking the About Widget Corp, there will be some pages beneath it like our mission and our history(fig-3). Similarly, for products and services as shown in given pic (fig-4, 5).

**Figure 4 Products**

**Figure 5 Services**

For the admin side, you have to go public/login.php (shown in fig-6) in the address bar where widget corp admin page should be seen for admin to login using username and password by clicking on submit button. After login, the page will redirect to public/admin.php which will have menu page and have welcome message for the username along with other links like manage website contents, manage admin users and logouts.

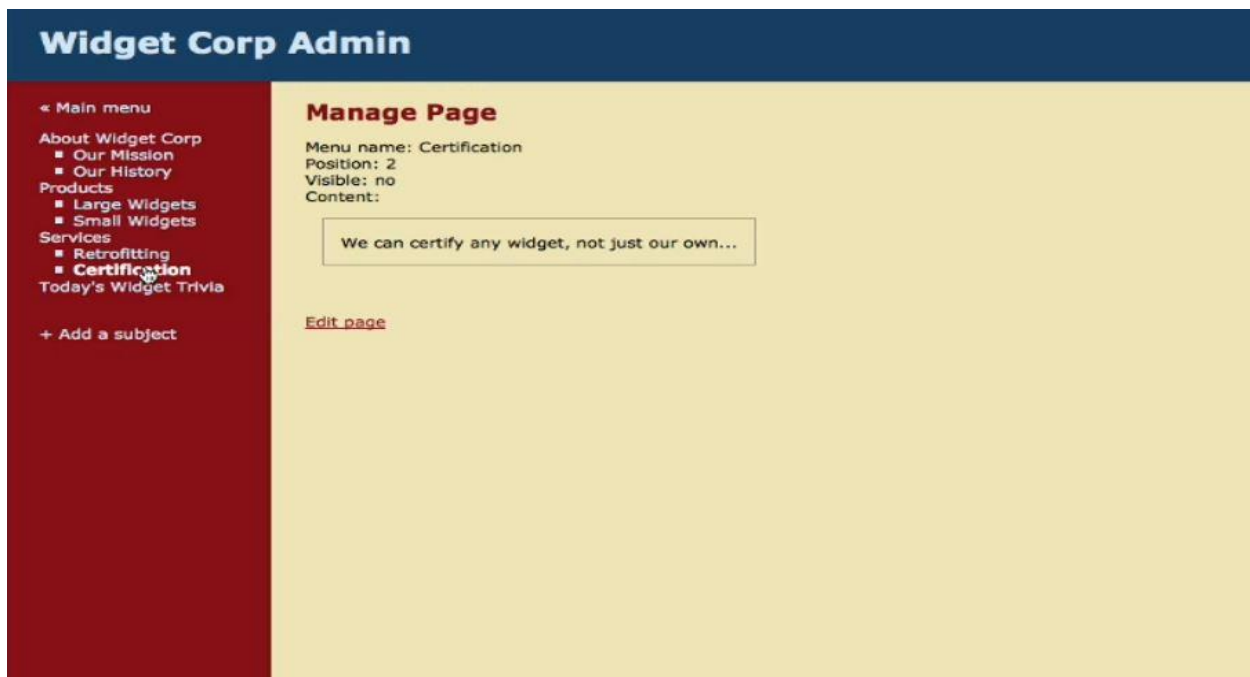

**Figure 6 Admin Page**

Once you will click manage website contents, there will be similar page like public side except it is not collapsing down i.e. all the things all the down with few extra things like add a subject, certification and today's Widget Trivia, those are the things which public will not able to see(visible =no) them but admin(shown in fig-7, 8 & 9).

**Figure 7 Manage Website Contents**

**Figure 8 Certification**

**Figure 9 Today's Widget Trivia**

Inside edit subjects or add a subject link (shown in fig-10), admin will allow to control Menu name, position, visible and add new contents and cancel will off course bring out of this page. There is also delete page at the bottom to delete the pages as well (shown in fig-11).

[Figure 10 About Widget Corp](#)

[Figure 11 Edit Page](#)

Inside manage admin, there will be list of usernames (shown in fig-12) where admin will be able to edit and delete control for these users. Edit option can change password given a username. Also there will be add new admin link too (shown in fig-12).

**Figure 12 Edit and delete Admin**

In the last of all there will be logout option link. And once you logout, it should redirect to public/login.php page.

**Figure 13 Logout**

To setup database table, consult fig-14.

<b>subjects</b> id menu_name position visible	<b>pages</b> id subject_id menu_name position visible content	<b>admins</b> id username hashed_password
---	---	--
